

Wildfires are unpredictable.

The safety of firefighters, you, and your property shouldn't be.

WHAT

The threat posed by forest fire is something with which homeowners in the West are all too familiar. However there are steps that can be taken at home to reduce the risk of structure loss due to forest fire. **TCD provides free Wildfire Risk Overviews of residential and commercial properties, and works with land and property owners to develop a plan for reducing that risk.** Through the Wildfire Risk Reduction Program, TCD can provide up to 50% of the cost of vegetative fuels mitigation activities surrounding structures.
